

Savitribai Phule Pune University

Faculty of Science & Technology

Curriculum for

Third Year

Production Engineering

(2019 Course)

(with effect from June 2021)

Savitribai Phule Pune University, Pune
TE (Production Engineering)
2019 Course
(With effect from Academic Year 2021-22)

Semester-V

Elective 2:

- I. Product Design and Development
- II. Nano Manufacturing
- III. Statistics and Numerical Methods
- IV. Financial Management and Costing

Engineering Metrology and Instrumentation
311081(A)

Teaching Scheme

Lectures: 3 hours / week

Credit Scheme

Theory: 3

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Prerequisites:

- Basic knowledge of Engineering drawing, Machine drawing, Dimensioning and tolerances, various geometrical features.
- Various manufacturing processes and their capabilities, correlation between operating parameters and process responses.
- Basic knowledge of standard machine tools such as: Lathe, Drilling machine, Milling Machine, etc.
- Basic knowledge of standard machine components such as: Gear, spring, Screw threads etc.

Course Outcomes:

After learning this subject, the student will be able to:

1. Describe and work with linear and angular measuring devices
2. Design limit gauges and work with special measuring devices for gear, screw thread and surface finish measurements
3. Distinguish various comparators and use profile projector
4. Use various control charts and various quality assurance tools
5. Implement quality standards for industrial application.
6. Implement TQM and TPM concepts in practice.

Unit I

Concept of measurement, Limits, fits and tolerances

(7)

Linear Measurement: Classification of Standards, Precision and Non Precision Measuring instruments, Slip Gauges.

Angular Measurement: Sine bar, Sine Center, Uses of sine bars, angle gauges, Auto Collimator, Angle Dekkor.

Comparators: Uses, Types, Advantages and Disadvantages of various Comparators.

Cost-Tolerance relationship, concept of Interchangeability, selective assembly, Indian Standard System. Design of limits Gauges using Taylor's Principle

Interferometry: Introduction, Flatness testing by interferometry, NPL Interferometer.

Unit II

(7)

Measurement of Thread, Gear and Surface finish

Screw Thread Metrology: External Screw Thread terminology, effective diameter measurement methods, Pitch and flank Measurement of External Screw Thread, Application of Tool Maker's Microscope, Use of Profile Projector.

Gear Metrology: Spur Gear Parameters, Gear tooth thickness measurement: Gear tooth Vernier caliper, Constant chord method, Span Micrometer, Base tangent method.

Surface Finish Measurement: methods of evaluation of surface roughness, Tomlinson's Surface Recorder, Talysurf and Taylor-Hobson Surface Meter

Recent Trends in Engineering Metrology, Universal coordinate measuring machine (CMM)

Unit III

(7)

Introduction to Quality and quality standards

Meaning of Quality, Quality of Product, Quality of Service, Cost of Quality, Value of Quality, Introduction to Statistical Quality Control: Control Charts, X, R, P and C Charts, Sampling inspection, OC Curves and Sampling Plans, Process

Capability Index (PCI), Concept, Methods of determining PCI and uses of PCI Introduction to ISO 9001-2000, ISO 9000-1998 Series standards, ISO 14000

Unit IV (7)

Quality Assurance tools and techniques

Quality Assurance tools and techniques, Total quality management (T.Q.M):- Deming's and Juran's Approach, Seven quality tools and new seven quality tools, Q.F.D., Quality Circles, Kaizen, six sigma, T.P.M. Technical Specification (T.S) TS 16949 Standards.

Unit V (7)

Introduction to measuring Instruments

Classification of measuring instrument, Stages in generalized measuring system – Sensor-Transducer stage, Signal-Conditioning stage, Readout-Recording stage; Types of input quantities; Active and Passive transducers. Performance characteristic of measuring devices –Static and dynamic

Unit VI: (7)

Measurement of stress, vibration and temperature:

Measuring instruments for - Strain and Stress Measurement, Force and torque, Vibration measurement, Temperature Measurement

Text Books:

1. K.J.Hume, "Engineering Metrology", Kalyani publication
2. K.W.B.Sharp, "Practical Engineering Metrology", Pitman Publication
3. F. M. Gryna, R. Chua & J. Defco, "Jurans Quality Planning and Analysis for Enterprise Quality", McGraw Hill series

Reference Books:

1. R.K. Jain, "Engineering Metrology", Khanna Publication.
2. I.C.Gupta, "A Text book of Engineering Metrology", Dhanpat Rai and Sons.
3. Kaoru Ishikawa, "Guide to Quality Control", Asian Productivity Organisation,
4. Juran's Quality Handbook
5. Thomas G. Beckwith, John H. L., Roy D. M., Mechanical Measurements, 6/E , Pearson Prentice Hall, 2007
6. Ernest O. Doebelin, Dhanesh N. Manik, Measurement Systems Application and Design, McGraw-Hill, 2004

Material Forming Technology
311082(A)

Teaching Scheme

Lectures: 3 hours / week

Credit Scheme

Theory: 3

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Prerequisites: Manufacturing process I

Course Outcomes;

Students will be able to:

1. Understand mechanism of plastic deformation.
2. Classify and analyze various forming as well as special forming processes
3. Identify problems (defects) in forming processes and apply knowledge to overcome these problems.

Unit I

(7)

Fundamentals of Material Forming

Introduction of forming processes. Concept of plastic deformation Classification of material forming process, True stress-True strain, Strain hardening, flow stress determination, Theory of plasticity, Yield criteria for ductile materials: Von- mises criteria, Tresca criteria. Effect of temperature, strain rate, friction, metallurgical microstructure. Concept of Formability, formability limits and formability diagram.

Unit II

(7)

Forging

Introduction, Classification of forging processes. Forging equipment- Hammers, presses, Upstter etc., construction, working, capacities and selection of equipment. Basic forging operations such as fullering, edging, drawing, blocking, finishing etc., Types of forging dies, Forgeability tests, design of forging as a product, friction in forging. Cleaning and finishing of forgings, Forging defects and the remedies. Analysis of forging with sliding and sticking friction, New technologies: Liquid metal forging, isothermal forging, No draft forging, P/M forging, Rotary swaging, roll forging, Lubrications in forging.

Unit III

(7)

Wire, Rod and Tube Drawing

Introduction to rod and wire drawing machines - construction and working. Preparation of stock for wire drawing. Wire drawing dies, material and design. Analysis of wire drawing operation, Variables in wire drawing, Maximum reduction in wire in one pass, forces required in drawing. Multiple drawing, work hardening, lubrication in wire drawing, strip drawing.

Tube Drawing: Methods, force calculation, stock preparation. lubrication in tube drawing.

Unit IV

(7)

Rolling of Metals

Scope and importance of rolling. Types of Rolling Mills - Construction and working. Roll bite, reduction, elongation and spread. Deformation in rolling and determination forces required. Process variables, redundant deformation. Roll flattening, Roll cambering, Mill spring – its effect on rolling process. Defects in rolling. Automatic gauge control (AGC), Roll pass classification & design. Lubrication in rolling.

Unit V

(7)

Extrusion

Types: Direct, Indirect, impact, hydrostatic extrusion. Dies for extrusion, stock preparation. Extrusion ratio, Circumscribing circle diameter (CCD), Shape factor. Equipment (with and without friction), Work done in extrusion, Metal flow in extrusion, defects. Role of friction and lubricants. Manufacture of seam-less tubes.

Unit VI

(7)

Advances in Metal Forming

High Energy Rate Forming process (HERF), High Velocity Forming (HVF) - principles, comparison with conventional forming processes. Explosive forming, Magnetic pulse forming, Electro hydraulic Forming. Petro-forging forming, Micro forming, Micro coining, micro extrusion, Micro bending, Stretch forming, coining embossing, curling spinning, flow forming advantages, limitations and application of the process, methods of measuring friction in metal forming.

Text Books:

1. Dieter, "Mechanical Metallurgy" ISBN0071004068
2. P.N. Rao, "Manufacturing Technology", Tata-McGraw Hill ISBN0070087695
3. G.W. Rowe, "Principles of Industrial Metal Working Process", Edward Arnold ISBN8123904282.
4. Juneja B. L., "Fundamentals of metal forming processes", New Age International Ltd.

Reference Books:

1. Dr. R. Narayanswamy, Metal Forming Technology, Ahuja Book Co., ISBN8176190020
2. Surender Kumar, Principles of Metal Working.
3. ASM: Metal Handbook, Volume 14, "Forming".
4. SME: Tool and Manufacturing Engineers Handbook, Volume 2, "Forming"

Elective 1- Finite Element Analysis
311083(A)-I

Teaching Scheme

Lectures: 03 hours / week

Credit Scheme

Theroy: 03

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Prerequisites: Fundamentals of Programming Language, Engineering Mechanics, Strength of Material, Kinematics of Manufacturing Machines, Design of Machine Elements, Heat and Fluid Engineering

Course Objective:

- 1) To provide the knowledge about Finite element method.
- 2) To aware the students about programming of force analysis of mechanical components and structures.
- 3) To provide knowledge about the heat transfer analysis of component.
- 4) To aware the students about recent software's used in simulation and analysis.

Course Outcomes

After successful completion of course student will able to,

- 1) Model and Analyze 1-D problem.
- 2) Model and Analyze Truss subjected to loading
- 3) Model and Analyze Two-Dimensional Problem Using Constant Strain Triangles
- 4) Perform finite element modeling of triangular element and 2-D iso-parametric elements
- 5) Analyze steady state heat transfer - 1D and 2D heat conduction and convection
- 6) Identify meshing techniques quality aspects of meshing

Unit I: Introduction

[7]

Introduction, One Dimensional Problem, Finite Element modeling, Coordinate and Shape function, Derivation of stiffness matrix and Load Vector using Potential Energy approach, Properties of Stiffness Matrix, Assembly of Global Stiffness Matrix and Load Vector, Elimination and penalty approach, shape function, Quadratic Shape Function.

Unit II: Trusses

[7]

Introduction to different approaches used in FEA such as direct approach, Variational approach, weighted residual, energy approach, Galerkin and Raleigh Ritz approach, Introduction to Plane trusses, Assembly of global Stiffness Matrix for Banded Skyline solutions.

Unit III: Two-Dimensional Problem Using Constant Strain Triangles

[7]

Introduction, finite element formulation, load considerations and boundary conditions, problem modeling, member end forces, plane frame.

Formulation of elemental stiffness matrix and load vector for Plane stress/strain such as Linear Strain Rectangle (LSR), Constant Strain Triangles (CST), Pascal's triangle, primary and secondary variables, properties of shape functions.

Unit IV: Axi-symmetric solids subjected to axi-symmetric loading

[7]

Introduction, axi-symmetric formulation, finite element modeling of triangular element

Two dimensional iso-parametric elements

Introduction, four node quadrilateral, introduction to higher order elements.

Unit V: Finite element analysis of heat transfer

[7]

Introduction, steady state heat transfer - 1D and 2D heat conduction and convection, governing differential equation, boundary conditions, formulation of element.

Unit VI: Dynamic analysis**[7]**

Types of dynamic analysis, General dynamic equation of motion, point and distributed mass, lumped and Consistent mass, Mass matrices formulation of bar and beam element. Undamped-free vibration- Eigenvalue problem, Evaluation of eigenvalues and eigenvectors (natural frequencies and mode shapes).

Text Books

1. A First Course in the Finite Element Method, Daryl L. Logan

Elective 1-Advances in Manufacturing Processes
311083(A)-II

Teaching Scheme

Lectures: 3 hours / week

Credit Scheme

Theory: 3

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Prerequisites: Manufacturing process I

Course Outcomes:

Students will be able to:

1. Compare and contrast NC/CNC and conventional machine tools
2. Classify & compare various mechanical based unconventional machining processes
3. Classify, compare and explain with neat sketches various thermal & chemical energy based non- conventional machining processes.
4. Evaluate & select suitable advanced casting process for wide variety of application
5. Understand advanced welding process.
6. Evaluate & select suitable advanced material forming process for wide variety of application

Unit 1 (7)

NC/CNC processes

NC and CNC process - NC/CNC/DNC Machining and Machines, Tape format, Basic Principles of NC Machines, Comparison between NC and Conventional Machine Tools, CNC Tooling, CNC machine tool & control system, CNC programming-basic G and M codes, canned cycle. Introduction to Turning and Machining Center, PLC based machine tools

Unit 2 (7)

Unconventional Machining Processes-I

Need & types of non conventional methods & importance of methods, Principle of working, equipment, Mechanism of material removal, Process parameters, performance characterization, Applications of following process such as Abrasive jet machining (AJM), Water jet machining (WJM), Abrasive Water jet machining(AWJM), Ultrasonic machining(USM).

Unit 3 (7)

Unconventional Machining Processes-II

Principle of working, equipment, Mechanism of material removal, Process parameters, performance characterization, Applications of following process such as Electrochemical machining (ECM), Electro discharge machining (EDM), Electron beam machining (EBM), Laser beam machining (LBM) processes, working principal of Plasma arc machining.

Unit 4 (7)

Advanced Casting Processes

Metal mould casting, Continuous casting, Squeeze casting, vacuum mould casting, Evaporative pattern casting, ceramic shell casting

Unit 5 (7)

Advanced Welding Processes

Weld Design: Welding machines/equipments and its characteristics and arc-stability, Weld defects and distortion and its remedies, Inspection/testing of welds, Weld Design, Welding of pipe-lines and pressure vessels. Life prediction. Thermal and Metallurgical consideration. Thermal considerations for welding, temperature distribution, Analytical/Empirical analysis/formulae, heating & cooling curves. Metallurgical consideration of weld, HAZ and Parent metal, micro & macro structure. Solidification of weld and properties.

Unit 6 (7)

Modeling and Simulation of Manufacturing Processes

Introduction to Process Modelling of casting, welding, forging, rolling processes. FEA of metal forming Reduction and proportions of the plastic zone, deformations from the velocity field Technological tests and physical simulation for flow stress data Formability and workability Kinetic model for Nucleation and Grain Growth

Elective 1-Mechatronics

311083(A)-III

Teaching Scheme

Lectures: 3 hours / week

Credit Scheme

Theory: 3

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Unit-1 Introduction to Mechatronics: [5]

Definition, Objective of Mechatronics, Overview of mechatronics systems, Current scenario in industry.

Unit-2 Sensor Technology: [6]

Different Types of Sensors and Transducers: Displacement, position, proximity, force, Temperature, Pressure, liquid flow, liquid level, light sensors, photoelectric sensors. Performance terminology, case studies on selection of sensors.

Unit-3 Electronics and Electrical systems: [6]

Electronic systems: Resistors, capacitors, diodes, transistors, Silicon Controlled Rectifier (SCR), DIAC etc. electronic components,

Electrical systems: Actuators- Motors- DC motors, Servo-Motors, Induction Motors, Protection systems: Circuit breakers, Fuses, Switchgears

Unit 4: Programmable Logic Controller:

Introduction, PLC vs. other types of controls, product applications, discrete input output system, analog input output system, PLC programming,

Unit-3 Hydraulic and Pneumatic systems: [6]

Hydraulic components: Hydraulic circuit analysis (regenerative, sequencing, meter in and meter out etc.) Case studies on hydraulic circuit design. Pneumatic systems: Pneumatic Components Pneumatic circuit design, Maintenance and Safety Aspects of Hydraulic and pneumatic system, Selection of Components.

Unit-4 Mechanical Systems: [6]

Types of motions, kinematic chains, Cams, Gear Drive, Belt Drive, Chain drive; Bearings: Types, selection; Fasteners: Types, Application, Selection criterion.

Unit-5 Data Acquisition and SCADA system: [6]

Data Acquisition System, Analog to Digital Converters, Digital to Analog Converters, Data Storage and Display, SCADA, HMI, Network communication.

**Elective 1-Supply Chain Management
311083(A)-IV**

Teaching Scheme

Lectures: 03 hours / week

Credit Scheme

Theroy: 03

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Course Objective

To help understand the importance of and major decisions in supply chain management for gaining competitive advantage.

Course Outcomes

After Successful completion of this course students will able to,

- Build and manage a competitive supply chain using strategies, models, techniques and information technology.
- Optimize supply chain network
- Plan the demand, inventory and supply

UNIT I: Introduction

[7]

Supply Chain – Fundamentals –Evolution- Role in Economy - Importance - Decision Phases - Supplier- Manufacturer-Customer chain. - Enablers/ Drivers of Supply Chain Performance. Supply chain strategy - Supply Chain Performance Measures.

UNIT II: Strategic Sourcing

[7]

Outsourcing – Make Vs buy - Identifying core processes - Market Vs Hierarchy - Make Vs buy continuum -Sourcing strategy - Supplier Selection and Contract Negotiation. Creating a world class supply base- Supplier Development - World Wide Sourcing.

UNIT III: Warehouse Management

[7]

Stores management-stores systems and procedures-incoming materials control-stores accounting and stock verification Obsolete, surplus and scrap-value analysis-material handling-transportation and traffic management -operational efficiency-productivity-cost effectiveness-performance measurement

UNIT IV: Supply Chain Network

[7]

Distribution Network Design – Role - Factors Influencing Options, Value Addition – Distribution Strategies - Models for Facility Location and Capacity allocation. Distribution Center Location Models. Supply Chain Network optimization models. Impact of uncertainty on Network Design - Network Design decisions using Decision trees.

UNIT V: Planning Demand, Inventory and Supply

[7]

Managing supply chain cycle inventory. Uncertainty in the supply chain – Analyzing impact of supply chain redesign on the inventory - Risk Pooling - Managing inventory for short life - cycle products -multiple item -multiple location inventory management. Pricing and Revenue Management

UNIT VI: Current Trends

[7]

Supply Chain Integration - Building partnership and trust in SC Value of Information: Bullwhip Effect - Effective forecasting - Coordinating the supply chain. . SC Restructuring - SC Mapping - SC process restructuring, Postpone the point of differentiation – IT in Supply Chain - Agile Supply Chains -Reverse Supply chain. Agro Supply Chains.

Kinematics and Design of Machines
311084(A)

Teaching Scheme

Lectures: 3 hours / week

Credit Scheme

Theory: 3

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Prerequisites: Engineering Mechanics, Mechanics of Materials, Theory of Machines, Design of Machine Elements.

Course Outcomes:

After studying the subjects students will be able to

1. Perform kinematic synthesis, analysis of mechanisms.
2. Apply fundamentals of kinematics of machines this includes analysis of kinematics of gears, gear trains, cams, flywheel etc.
3. Design mechanical system for fluctuating loads.
4. Demonstrate optimum design principles and statistical considerations and apply it to mechanical components.

Unit I

(7)

Synthesis and Analysis of mechanisms:

Computer Aided Analysis and coupler curves for four bar mechanism and slider crank mechanism, dimensional synthesis of mechanisms, three position synthesis of slider crank mechanism and four bar mechanism, Over lay method, Bloch Synthesis

Unit II

(7)

Theory of spur gear and Gear Train:

Classification, Spur gear: definition, terminology, fundamental law of toothed gearing, involute and cycloidal profile, path of contact, arc of contact, conjugate action, contact ratio, interference and under cutting – Methods to avoid interference.

Gear Trains Simple, compound, epicyclic gear trains, Computation of velocity ratios and torque transmitted in epicyclic gear trains.

Unit III

(7)

Cams and Flywheels

Cams: Types of cams and followers, terms used in radial cams, analysis of motion of follower, displacement, velocity, acceleration, and jerk diagrams, and determination of cam profile for various types of follower motions: uniform velocity, SHM, uniform acceleration and retardation, cycloidal

Flywheels: Introduction, Turning Moment Diagram, Fluctuation of speed, Fluctuation of energy, Coefficient of fluctuation of speed, Maximum fluctuation of energy, Energy stored in flywheel, flywheel in punching presses.

Unit IV

(7)

Design for Fluctuating Load:

Stress concentration-causes & remedies, fluctuating stresses, fatigue failures, S-N curve, endurance limit, notch sensitivity, endurance strength modifying factors, design for finite and infinite life, cumulative damage in fatigue failure, Soderberg, Gerber, Goodman, Modified Goodman diagrams, Fatigue design of components under combined stresses.

Unit V

(7)

Statistical considerations in design

Frequency distribution- Histogram and frequency polygon, normal distribution - units of central tendency and dispersion-standard deviation - population combinations - design for natural tolerances - design for assembly - statistical analysis of tolerances, mechanical reliability and factor of safety.

Unit VI

(7)

Optimum Design and DFMA

Optimum Design:

Objectives of optimum design, adequate and optimum design, Johnson's Method of optimum design, primary design equations, subsidiary design equations and limit equations, optimum design with normal specifications of simple machine elements- tension bar, transmission shaft and helical spring, Pressure vessel.

Design for manufacturing and assembly:

General principles of design for manufacture and assembly (DFM and DMFA), principles of design of castings and forgings, design for machining, design for safety.

Machining Science and Technology
311085(A)

Teaching Scheme

Lectures: 3 hours / week

Credit Scheme

Theory: 3

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Prerequisites: Manufacturing processes-I, Material science, Machine Drawing & Computer Graphics,

Course Outcomes:

Students will be able to:

1. Know with the basic concepts of machining science like mechanics of machining,
2. Evaluate Tool wear, tool life and cutting forces
3. Infer the different cutting tool geometry and economics of machining
4. Design and draw the different cutting tools Calculate the cutting force components in orthogonal cutting
5. Apply aspects of economics of machining in practice

Unit I

(7)

Mechanics of Machining:

Mechanics of chip formation, Types of chips Orthogonal & oblique cutting, Concept of feed, depth of cut and cutting speed, Geometry of single point tool, Tool signature, Mechanics of metal cutting- effect of tool-geometry and other cutting parameters, Mechanics of orthogonal steady state metal cutting, shear plane and shear plane angle, Merchant's assumptions, Merchant circle and derivation of relationships between the cutting forces, chip thickness ratio, shear angle, stress and strain in the chip, work done and power required in metal cutting. Numericals based on metal-cutting

Unit II

(7)

Cutting tool Materials, standards & Dynamometry

Cutting tool materials, Desirable properties of tool material, Coated tools , Coating techniques on tool, Heat treatment of tools Tool angle specification systems-British system, American system, German system, ISO system, Nonconventional tool geometry: Koleshov tool, Antichatter tool, Gustin tool, Classification of dynamometers, Study of working principles in Lathe, Milling, Drilling, Grinding dynamometers, piezoelectric dynamometry

Unit III

(7)

Thermal aspect, Tool life & Economics of cutting tools

Sources of heat generation, Temperature in primary and secondary deformation zone, Effect of cutting speed on temperature, Tool wear and its type, Tool wear mechanism, Types of cutting fluids, Functions of cutting fluids, Characteristics of cutting fluid Selection of cutting fluids, Taylor's Tool life equation. Factors affecting tool life, Tool failure criteria. Machinability, Machinability rating, Machinability criteria, Economics of machining, Criteria for minimum cost & maximum production. Numerical based on tool life.

Unit IV

(7)

Tool life and machining economics:

Definition, flank wear and crater wear, criteria for tool failure, effect of cutting parameters and tool geometry on tool life. Taylors tool life equation. Experimental methods to find Taylor exponents. Components of product cost, Optimum cutting velocity for minimum cost of production and maximum production rate.

Unit V

(7)

Design of single point cutting tools

Design of shanks for single point solid cutting tools , tipped tools , Chip breakers Throwaway indexable inserts , ANSI inserts specification, ANSI tool holder specification for indexable insert. Design of single point solid cutting tool.

Unit VI:**(5)****Design of Multi point cutting tools:**

Design of drills, reamers, broaches, milling cutters, form tools, grinding wheels. Constructional details and fields of application of multipoint cutting tools.

Text Books:

Engineering Metrology and Instrumentation Lab
311081(B)

Teaching Scheme

Practical: 2 hours / week

Credit Scheme

Practical: 01

Examination Scheme

PR: 50 Marks

List of Experiments (Any Eight)

1. Linear and angular Measurement using precision/non-precision instruments.
2. Study of Comparators and Design of Limit Gauges.
3. Measurement of the Surface roughness
4. Measurement of Screw thread parameters using Floating Carriage Micrometer.
5. Measurement of Gear tooth thickness using Gear tooth Vernier caliper
6. Study of quality standards via Industrial visit
8. Study of Quality Assurance tools and techniques
9. Experiment on Mechanical Measurement systems
10. Experiment on Measurement of Stress, Vibration and Temperature

**Material Forming Technology Lab
311082(B)**

Teaching Scheme

Lectures: 2 hours / week

Credit Scheme

Practical: 01

Examination Scheme

Oral: 25 Marks

Oral will be based on term-work below

Term work :

Term work shall consist of:

1. Assignment based on each topic of syllabus
2. Study of roll pass design for one structural shapes -Round or Square
3. Report of Industrial visit (Min. 2 Industrial visit)

Elective 1-Finite Element Analysis Lab
311083(B)-I

Teaching Scheme

Lectures: 2 hours / week

Credit Scheme

Practical: 01

Examination Scheme

TW:25 Marks

Term work shall consist of following Practical's

- 1 Computer program for axial bar subjected to axial forces.
- 2 Computer program for truss subjected to plane forces.
- 3 Computer program for beams subjected to transverse forces and moments
- 4 Computer program for frames subjected to transverse forces and moments
- 5 Stress and deflection analysis of two dimensional truss using FEA software
- 6 Stress and deflection analysis of any machine component consisting of 2-D elements using FEA software.
- 7 Stress and deflection analysis of any machine component consisting of 3-D elements using FEA software
- 8 Modal analysis of any machine components.
- 9 Computer program for 1-D temperature analysis
- 10 Thermal analysis of member subjected to loading
- 11 Shear force and Bending Moment Calculations of Shaft using FEA software
- 12 Analysis of component subjected to self weight
- 13 Thermal analysis of composite wall

**Elective 1-Advances in Manufacturing Processes-Lab
311083(B)-II**

Teaching Scheme

Lectures: 2 hours / week

Credit Scheme

Practical: 01

Examination Scheme

TW:25 Marks

Assignments will be given on following point on each unit and industrial visit to any advanced manufacturing industry

1. NC/CNC/DNC Machining, G and M code programming, Turning and vertical machining centers
2. Principle, working and applications of AJM, USM
3. Principle, working and applications of EDM, ECM, LBM, EBM.
4. Assignment on Advance casting process.
5. Assignment of advance welding process.
6. Modeling and Simulation of Manufacturing Processes (at least one simulation assignment on each Unit)

Elective 1- Mechatronics Lab
311083(B)-III

Teaching Scheme

Lectures: 02 hours / week

Credit Scheme

Pr/Or: 01

Examination Scheme

Termwork: 50 Marks

Lab Work (any 6)

1. Measurement of Temperature
2. Measurement of Force using Strain Gauges
3. Measurement of Angular Velocity using proximity pickup/ encoders
4. Measurement of Displacement using LVDT
5. Electro-Hydraulic circuit design
6. Electro-pneumatic circuit design
7. Demonstration of Op-Amps for Summing and Inverting Amplifier
8. PLC program for any real time example e.g. elevator, conveyor, bottle filling plant

Elective 1- Supply Chain Management Lab
311083(B)-IV

Teaching Scheme

Lectures: 02 hours / week

Credit Scheme

Pr/Or: 01

Examination Scheme

Termwork: 50 Marks

Term work will be based on one assignment on each unit and any two case studies are to be prepared separately by every project group.

1. Case study on Supplier selection.
2. Case study on Logistics management.
3. Case study on Supply Chain Management

Kinematics and Design of Machines Lab
311084(B)

Teaching Scheme

Lectures: 2 hours / week

Credit Scheme

Practical: 01

Examination Scheme

Oral:25 Marks

Term Work

Term work will be based on following practical/design assignments

1. To write a computer program for analysis and animation of any mechanism and test it.
2. Determination of holding torque in epicyclic gear train.
3. To draw a cam profile for specific follower motion
4. Study of Flywheel in punching machines.
5. Assignment on Design machine component for fluctuating load
6. Assignment on Design machine component for statistical considerations.
7. Assignment on Design machine component for optimum design

Machining Science and Technology- Lab
311085(B)

Teaching Scheme

Lectures: 2 hours / week

Credit Scheme

Practical: 01

Examination Scheme

Term-work: 25 Marks

List of Experiments:

1. Experiments on chip formation.
2. Measurement of cutting forces (anyone) in Turning / Milling /Drilling.
3. Study of effect of tool geometry, cutting speed, feed, depth of cut on cutting parameters.
4. Design and working drawing of single point cutting tools
5. Design and working drawing of drills and reamers
6. Design and working drawing of broach
7. Design and working drawing of milling cutter

**Seminar
311086**

Teaching Scheme

Seminar: 1 hours / week

Credit Scheme

Seminar: 01

Examination Scheme

TW: 50 Marks

1. The objective of Seminar is to test the student on his/her ability for self-study and his/her ability to communicate - Written and oral.
2. Seminar will be in the form of a report submitted by the student:
 - a) On topic of his/her choice based on literature survey/ a case study wherever applicable/possible, and approved by the staff- in- charge.
 - b) A report with 20-25 pages of A-4 size paper, 1.5 spaced typed material, and appropriately bound.
 - c) Title font/figures/graphs shall be black and white.
3. The term work evaluation will be based on the report submitted and (orally) presented.

Mandatory Audit Course 5: Disaster Management

311087

The course is intended to provide a general concept in the dimensions of disasters caused by nature beyond the human control as well as the disasters and environmental hazards induced by human activities with emphasis on disaster preparedness, response and recovery.

Course Contents:

1. Different Types of Disaster: Natural and man made
2. Risk and Vulnerability Analysis
3. Disaster Preparedness
4. Disaster Response
5. Reconstruction and Rehabilitation as a Means of Development.
6. Damage Assessment
7. Post Disaster effects and Remedial Measures.
8. Long-term Counter Disaster Planning

Elective 2-Product Design and Development
311088(A)-I

Teaching Scheme

Lectures: 03 hours / week

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Prerequisites: Production Management

Course Objectives:

- ☐ To carry out the engineering design process for new product.
- ☐ To understand the generic product development process.
- ☐ Use of various analysis tools for product design & development.
- ☐ To understand the structure of PLM in organization

Course Outcomes:

After Successful completion of this course students will be able to

- ☐ Carry out the basic engineering design process and also various techniques used for a product.
- ☐ Construct the product development process and customer requirements, QFD.
- ☐ Evaluate the performance measure of design and DFM of a product.
- ☐ Perform the case study of product life cycle management of a product

Unit I: Engineering Product Design

Introduction to engineering design process, Industrial design, Importance of the engineering Design process, Types of designs, Engineering design process, A simplified iteration model, Design method versus scientific method, A problem-solving methodology, Considerations of a good design, Total life cycle, Regulatory and social issues, Description of design process, Conceptual design ,Embodiment design, Detail design, Planning for manufacture, Planning for distribution, Planning for use, Planning for retirement of the product.

Unit II: Embodiment Design

Product architecture, Modular product architecture, Implication of Architecture, Establishing the Architecture, Product configuration and concurrent engineering, parametric design: steps, Failure Mode and Effect Analysis.

Unit III: Product Development Process

Product life cycle, Generic product design process, Stage gate system of product development, Product Development process flow, Types of products, Product planning, Product planning process, Markets and marketing, Functions of marketing department, Element of marketing plan, Product development Economics.

Unit IV: Identifying Customer Needs

Identifying customer needs, Voice of customers, preliminary research on customers' needs, Gathering information from customers, Customer requirements, Differing views of customer requirements, Classifying customer requirements, Kano model, Establishing the engineering characteristics, Benchmarking in general, Competitive performance benchmarking, Reverse engineering or product dissection, Determining engineering characteristics, Quality function deployment, The house of quality, Steps for building a house of quality

Unit V: Design for Manufacture (DFM) and Design for Assembly (DFA):

DFM guidelines, Specific design rules, Overview of DFM process, Design of castings: Guidelines for the design of castings, Producing quality Castings , Design of forgings: DFM guidelines for closed-die forging, Design for sheet-metal forming: sheet metal stamping, Sheet bending, Deep drawing, Design of machining, Design for Plastic processing: Injection Molding, Estimation of manufacturing cost,

Unit VI: Product Life Cycle Management (PLM)

Introduction to PLM, Opportunity & benefits of PLM, Components of PLM, PLM vision, Structure for PLM vision, PLM strategy, Product Data Management, Case studies in PLM (Auto Industry & Home appliances)

Text Books

1. Karl T. Ulrich & Steven D. Eppinger., Product Design & Development, M cGraw Hill, 3rd Edition, 2003.
2. Dieter and Schmidt , Engineering Design, McGraw – Hill Higher education, ISBN: 978–0– 07–283703–2

3. John Stark, Product Life Cycle Management, 21st Century Paradigm for Product Realization, Springer

Reference Books

2. Roland Engene Y., Inetoviez, New Product Development: Design & Analysis, John Wiley and Sons Inc., N.Y. 1990.
3. Geoffrey Boothroyd, Peter Dewhurst and Winston Knight. Product Design for Manufacture and Assembly, Amherst, 1983.
4. Bill Hollins, Stwout Pugh, Butterworth, Successful Product Design by London 1990.
5. Boothroyd & DewhurstP., Design for Assembly, a Designer's Hand book, University of Massachusetts, Amherst, 1983.
6. Keyinotto and Kristini Wood, Product Design Pearson Education 2004.
7. Bralla, James G., Handbook of Product Design for Manufacturing, McGraw Hill Pub. 1986
8. ISO Standard: 9001:2008: Clauses 7.1, 7.2, 7.3

Elective 2-Nano Manufacturing

311088(A)-II

Teaching Scheme:

Lectures: 3 Hrs./Week

Credit Scheme:

Theory: 3

Examination Scheme:

In-Sem Exam: 30 Marks

End-Sem Exam: 70 Marks

Course Objectives

1. To give awareness of different techniques used in micro-nano manufacturing
2. To give in-depth idea of the conventional techniques used in micro-nano manufacturing
3. To introduce Non-conventional micro-nano manufacturing and finishing approaches
4. To introduce Nanofabrication Techniques and other processing routes micro-nano manufacturing
5. To know different metrology tools used in micro-nano manufacturing

Unit-I: Ultra-precision Machining Processes

(07)

Introduction to nanoscale material removal process analysis, Ductile Mode Cutting of Brittle Materials, Advances and recent developments in material removal processes, Precision (micro and nano) machining processes, Applications of precision Turning, Drilling, Milling and Grinding processes, Cutting tools and instrumentation used in precision (micro and nano) machining processes, use of Diamond Tools in Micromachining,

Unit-II: Ultra-precision Forming Processes

(07)

Introduction to precision (micro and nano) forming processes, Applications of precision forging, Plastic forming and Roller Imprinting, extrusion, sheet metal forming and hydroforming, tools and instrumentation used in precision (micro and nano) forming processes.

Unit-III: Non-conventional micro-nano machining

(07)

Introduction to Non-conventional micro-nano manufacturing Processes, principle and applications of – Abrasive Jet Micro Machining, WAJMM, Micro EDM, Micro WEDM, Micro EBM, Micro ECM, Micro LBM, Fundamentals of lasers, Laser microfabrication, Laser nanofabrication.

Unit-IV: Nano Finishing Processes

(07)

Introduction to Nano Finishing Processes, Magneto-rheological Finishing (MRF) processes, Magneto-rheological abrasive flow finishing processes (MRAFF) – process principle and applications, Elastic Emission Machining (EEM) – machine description, applications, Ion Beam Machining (IBM) – principle, mechanism of material removal, applications, Chemical Mechanical Polishing (CMP) – Schematic diagram, principle and applications

Unit-V: Micro-nano Fabrication

(07)

Introduction to Micro and Nano Fabrication: basics, flowchart, basic chip making processes, Introduction to Nanofabrication, Nanofabrication using soft lithography– principle, applications, Introduction to Carbon nano materials – CN Tubes properties and applications

Unit-VI: Micro-nano Measurements

(07)

Introduction to micro and nano measurements, defining the scale, uncertainty Scanning Electron Microscopy – description, principle, Optical Microscopy– description, application, Scanning Probe Microscopy, scanning tunneling microscopy description, application, Introduction to On-Machine Metrology

Elective 2-Statistics and Numerical Methods
311088(A)-III

Teaching Scheme

Practical: 3 hours / week

Credit Scheme

Theory:03

Examination Scheme

In-sem Exam: 30

End-sem Exam: 70

Prerequisites: Engineering Mathematics- I and II, Design of Machine Elements

Outcomes: After studying the subjects students will be able to

1. Apply statistical methods to production engineering problems
2. Relate numerical methods to production engineering
3. Develop model of physical problem and subsequent solution by appropriate optimization method

Unit I (7)

Statistical hypothesis and tests

Testing of Hypothesis Sampling distributions - Estimation of parameters, Statistical hypothesis, Large sample tests based on Normal distribution for single mean and difference of means,-Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) - Goodness of fit

Unit II (7)

Design and Analysis of Experiments

Design and Analysis of Experiments: Importance of experiments, Experimental strategies, Basic Principles of Design Terminology, ANOVA, steps in experimentation, two and three full Factorial experiments, Taguchi Methods, Design using Orthogonal Arrays, S/N ratios, Data Analysis

Unit III (7)

Errors & approximations analysis

Errors & approximations: types of errors, error propagation. Numerical solution of algebraic and transcendental equations by bisection method.

Newton Raphson Method. Numerical solution of Linear Simultaneous Equations by Gauss Elimination Method, Gauss-Siedel Method.

Unit IV (7)

Methods of curve fitting

Numerical methods - Curve Fitting, methods of curve fitting. Least square criterion- 1st and 2nd order Interpolation: Lagrange's formula, Newton forward difference method. Methods of moment for curve fitting.

Unit V (7)

Numerical Differentiation

Interpolation, Newton's forward and backward difference interpolation, Numerical Differentiation and Numerical Integration, Lagrange's and Newton's divided difference, Approximation of derivatives using interpolation, polynomials – Numerical single and double integrations using Trapezoidal and Simpson's 1/3 rules

Unit VI (7)

Optimization Methods

Manufacturing Optimization- Method of Lagrange multipliers, steepest descent method, Introduction of classical optimization and multiple optimization. Generalized reduced gradient Method. Introduction to GA and SA. Case studies.

Reference Books:

1. Douglas C. Montgomery, Design and analysis of experiments, John Wiley and sons inc. New York 8th edition.

3. Dr. Sadhu Singh, –Computer aided Design and ManufacturingII, Khanna Publication, New Delhi.
4. Ramin S. Esfandiari, Numerical Methods for Engineers and Scientists Using MATLAB, CRC press, Taylor and Francis group.
5. Jaan Kiusalaas, Numerical Methods in Engineering with Matlab, Cambridge University press.

Elective 2-Financial Management and Costing
311088(A)-IV

Teaching Scheme

Lectures: 03 hours / week

Credit Scheme

Theroy: 03

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Pre-requisites: Industrial Engineering & Management, Production Management

Course objectives:

- To provide the participants a thorough grounding of financial management concepts and preparation of Financial Statements with their analysis.
- To gain expert knowledge of principles and concepts used in finance;
- To learn to manage short-term resources of a business firm
- To be able to find out the best course of action among several financial options;
- To help understand costing and management accounting techniques that could be utilized for decision making and control.

Outcomes:

After learning this subject, the student will:

1. Use Financial Statements to evaluate firm performance.
2. Calculate time value of money and Cost of Capital.
3. Demonstrate how materials, labor and overhead costs are added to a product at each stage of the production cycle.
4. apply cost accounting techniques and evaluate their limitations;
5. use and evaluate appropriate costing and decision making techniques to make short term decisions;
6. use standard costing systems to undertake a performance review and interpret the results

Unit I: Financial Management

[7]

Financial function, Scope, goals and tools. Sources of finance, corporate planning and financial management. Financial Statements: Balance sheet, profit and loss account. Ratio Analysis: Classification, Ratio Analysis and its limitations. Operating and Financial Leverage.

Unit II: Capital Budgeting

[7]

Control of Capital Expenditure, Evaluation Process-Payback approach, Accounting of Rate of Return, Present Value Method Vs Internal Rate of Return. Replacement cost and discounted cash flow.

Unit III: Working Capital Management

[7]

Concept and design of Working Capital, types of working capital, sources of working capital, time value of money, cost and capital, cost of capital. Funds Flow Analysis: Concepts, Objectives, and Techniques of Funds Flow Statement.

Unit IV: Costing

[7]

Methods of costing and elements of cost. Material Cost: Different methods of pricing of issue of materials. Material losses - Wastage and its consideration. Labour Cost: Different methods wages and incentive plans. Principles of good remunerating system, labour turnover and its methods.

Depreciation: Concept, importance and different methods of depreciation. Estimation of material, machining and labourcost machining. Overheads: Classification, collection of overheads, Primary and Secondary apportionment of overheads, absorption of overheads. Machine hour and labour hour rate. Under and over absorption of overheads. Estimation of overheads.

Unit V: Standard Costing and Variance Analysis:

[7]

Concept, development & use of standard costing. Material, Labour, Overhead, Sales. Profit, Product-mix and Yield Variance. Cost control: Capital cost control-the nature of control, elements of cost control programme, project planning and scheduling, cost reporting and corrective action. Capital cost control repetitive operating cost, standard costs, cost reporting and corrective action.

Unit VI: Types of Costing Methods**[7]**

Marginal Costing: Concept, Use of Marginal Costing in decision-making Activity based costing: Concept, cost drives, applications. Process costing: Concept, transfer cost, concept of by products, joint costing, scrap, waste, losses, cost of quality.

4. B. K. Bhar, "Cost Accounting Methods and Problems", Academic Publishers, Calcutta

Reference Books:

1. Henry M. Steiner, "Engineering Economics Principles", McGraw Hill Publication.
2. C.B. Gupta, "Fundamentals of Business", Sultan Chand & Co.,
3. P. A. Samuelson, "Economics", McGraw Hill International.
4. K. K. Dewett, "Modern Economic Theory", Sultan Chand & Co., ISBN 81-219-0331-1
5. Colin Drury, "Management and Cost Accounting", English Language Book Society, Chapman & Hall London.

**Production and Operations Management
311089(A)**

Teaching Scheme

Lectures: 3 hours / week

Credit Scheme

Theory: 3

Examination Scheme

In-Sem: 30 Marks

End-Sem: 70 Marks

Prerequisites: Industrial Engineering and Management

Outcomes: Learner will be able to:

1. Analyze implications of Production and Operations Management in industries.
2. Demonstrate the role of Production Management in creating competitive advantage for business organizations.
3. Analyze various constituents of production operations in manufacturing and service.
4. Plan and control various production related activities.
5. Illustrate various inventory management procedures with the tools employed there in.
6. Demonstrate role of JIT, MRP, and ERP with their contribution towards production and operations management.

Unit I

(7)

Introduction

An overview of Production and Operations Management (POM), Managing a Production System, Types of Production Systems, Significance of Productivity, Decision making in POM, Problems in POM, Sub functional areas of POM, Recent trends in POM.

Unit II

(7)

Product Planning and Development (PPD)

What is a Product?, Need, Objectives and Challenges of PPD, characteristics of Successful Product Development, New Product development Strategy and Process, Factors to be considered in Product Development, The Product Life Cycle Concept, Factors affecting Product Design and Product Development, Stages in Product Design and Product Development.

Unit III

(7)

Facility Location

The need for location decision, Procedure for making location decisions, Factors affecting location decisions, Methods of evaluating location decisions (numerical on this topic). Facility Layout / Plant Layout Types of Layout, Significance and Factors influencing layout choices, Principles of Plant layout, Computerized Layout Techniques.

Materials Handling

Function, Importance and Objectives of Material Handling, Material handling Principles, Types of Material Handling Systems, Selection of Material Handling Equipments, Evaluation of Material handling Performance Relationship with Plant layout (numerical on this topic)

Unit IV

(7)

Production Planning and Control

Classification of PPC functions, Factors determining PPC, procedure Role of PPC in POM, Principles of PPC, PPC in different Production System, Organisation of PPC department.

Unit V**(7)****Inventory Management**

Nature, Importance, Classification and Functions of Inventory, Inventory Costs, Importance of Inventory Management, Inventory Control System for Dependent Demand and Independent Demand, Inventory Ordering Systems. Inventory Control subject to Known Demand. The EOQ Model, Extension to Finite Production Rate, Quantity Discount Model (numerical on this topic). Inventory Control subject to Uncertain Demand, The Newsboy Model, Service Levels in Q and R Systems, (numerical on this topic)

Unit VI**(7)****Advance Topics in POM:**

Material Requirement Planning (MRP) (numerical on this topic), Manufacturing Resource Planning (MRP II), Enterprise Resource Planning (ERP), Just in Time Manufacturing, Lean Production, Agile Manufacturing, Line Balancing (numerical on this topic), Line of Balance (numerical on this topic), Sustainable Production and Green Manufacturing. Block chain technology for Supply chain monitoring, Materials provenance and counterfeit detection, Identity management, Asset tracking, Quality assurance, Regulatory compliance

Process Engineering and Resource Planning
311090(A)

Teaching Scheme

Theory: 3 hours / week

Credit Scheme

Theory:03

Examination Scheme

In-sem Exam: 30
Endsem Exam: 70

Prerequisites:

Basic knowledge of CAD, Machine Drawing and Computer Graphics, Manufacturing Process, Cutting Tool Engineering, Production Practice, Industrial Engineering and Management

Outcomes:

Students will be able to

1. Carry out Part print analysis of industrial component drawing
2. Design of Process sheet on GPM for batch production
3. Design of Process sheet for mass production
4. Compute time estimation for assembly using flow-charting techniques
5. Analyze and differentiate between Computer aided process planning

Unit I

(6)

Process Engineering:

Product design and role of product designer Analysis of part print: Method of reading and interpreting the part print, identification of nature of work to be performed, Identification of functional surfaces, grouping of related surfaces to be machined, Identification of basic process for processing and sequence of operation from part print. Process engineering and its functions, Co-ordination of process Engineering with other departments., Organization chart, general manufacturing processes, concept of design for manufacturing, communication in engineering Industry, glossary of terms used in process planning.

Unit- II

(6)

Geometric dimensioning and tolerance analysis

Dimensional Analysis: Types of dimensions, concept of baseline dimensions, datum selection, dimensional chain and linkage analysis, concept of straightness, flatness, roundness, concentricity and other geometrical forms. Surface quality and surface finish/surface integrity and its effect on product properties. Tolerance Analysis: Producing accuracies and attainable accuracies- process capability relation with statistical accuracies, prime accuracies, tolerance chart, tolerance grades and its calculations, tolerance stack, tolerance analysis for assembly.

Unit-III

(7)

Work-piece control and selection of operations:

Causes of work-piece variations, variables influencing work-piece control, equilibrium theories, mechanical, geometrical and dimensional control, Concept of location – fundamentals of locating, datum features, errors in location and clamping, establishing process areas, guidelines for identifying holding areas, supporting areas and critical areas. Study of basic process operations, principal processes and auxiliary processes, Identification of major, critical, qualifying, re-qualifying and supporting operations. Selection of single or combined operations, Identification of finishing operations, Establishing manufacturing sequence.

Unit- IV

(7)

Equipment & Tooling Selection:

Factors to be considered in equipment/machine selection, determining machine up and down time. Types of tooling, Factors affecting selection of tooling, use of multi-tooling set-up. Process Sheet Design: Study of the part-print , logical design of

process plan, stock preparation, blank size selection with material estimates, Selection of datum surfaces, identification of machining surfaces, dimension and tolerance analysis, selection of machining methods with time estimates and standard time for each operation, Preparation of process picture sheet and operation route sheet for complete manufacturing part.

Unit-V

(7)

Process Selection and Capacity Planning

Component of process selection, Factor affecting on process selection decisions, Designing the process (Process flow analysis ,Process Re-engineering, Product –Process Mix, Operations Strategy, Capacity utilization, Capacity Planning, Importance of capacity decisions, Defining and measuring capacity, Dimensions of capacity, Determining capacity requirements, Developing capacity alternatives, Factors determining effective capacity, Introduction to theory of constraints , OEE and its calculation

Unit- VI

(7)

Computer aided process planning

Advantages over manual process planning, approaches for CAPP: Generative Process Planning, Knowledge-based Process Planning, Feature Recognition in Computer Aided Process Planning, recent trends

Text Books:

1. Eary D. F., Johnson G. E., "Process Engineering for manufacture" Prentice Hall of India Pvt. Ltd.
2. Narayana K. L., Kanniah P., Vankata Reddy K., "Production Drawing", New age international Publishers.
3. GrooverMikell P., Automation, Production Systems, and Computer-Integrated Manufacturing, Third Edition, PHI Learning Private Limited.

Reference Books:

1. Scallan P., "Process Planning- Design/Manufacture Interface", John Wiley & Sons, 1995.

**Production Tooling
311091(A)**

Teaching Scheme

Lectures: 4 hours / week

Credit Scheme

Theory:03

Examination Scheme

In-Sem: 30 Marks

End- Sem:70 Marks

Prerequisites: Machine drawing, Material, Manufacturing technology

Course Outcomes:

Students will be able to-

1. Design and draw jigs and fixtures
2. Choose appropriate dies/press tools/molds based on type of operations
3. Design and draw Press tools.
4. Design and draw forging dies
5. Design and draw injection molds.

Unit I

Design of Jigs and Fixtures

(8)

Press working terminology, Basic press working operations, types of presses, elements of die sets, types of die sets, types of dies: simple, compound, progressive, combination and inverted dies, Types of strip layouts, types of die blocks, types of strippers, types of stoppers, types of punches, punch plate, back up plate, types of die sets, selection of die set: die holder, pillar size, guide bushes, punch holder,

Unit II

Press tool Design

(6)

Design of Blanking dies and progressive dies: Strip layouts, percent utilization, analysis of cutting force and stripping force, Method of reducing the cutting forces, calculation of press tonnage, clearance, Standards and specifications. Aspects of die design and drawing

Unit III:

Design of Drawing and Bending Dies

(6)

Design of shallow and deep drawing die, Calculation of blank size by area and graphical method percentage reduction and diameter and height of cup in each stage in each stage, number of draws, drawing force and blank holding force in each draw, press capacity.

Types of Bending dies, Developed length calculation, bending force, spring back

Unit IV:

Design of Forging Dies

(8)

Multi Impression Die: Design of forging die for multi-implosion die-: selection of parting line, stock size calculation, flash and gutter, drafts, fillet & corner radii, ribs and webs, design of fullering, edging, blocking, finishing impressions, trimming dies, Die block dimensions, die inserts.

Upsetting die: Rules for upset forging, design of upset die.

Unit V:

Die casting die design

(7)

Die casting process, machines, die casting materials, specific details of die constructions, casting ejection, cores, slides, loose die pieces, types of cores, directional solidification, types of feeders, die venting, water cooling, classification of dies- single,

combination, multi-impression. General details of die design, inserted impressions, die casting defects & their remedies, die lubrication- types & methods

Unit VI:

Design of Injection mold

(6)

Plastic molding materials, types of plastic processing techniques, Determination of number of cavities, design of feed system- design of sprue, sprue puller, runners & gates, types of cooling system, design of cooling channels, heat transfer considerations, , determination of mould opening force & ejection force, design of ejector system, use of CAD for mould design.

Elective II-Product Design & Development Lab
311088(B)-I

Teaching Scheme

Practical: 2 hours / week

Credit Scheme

Practical:01

Examination Scheme

PR: 50 Marks

Term work will be based on any six assignments from following;

1. Morphological analysis of product design
2. Quality Function Deployment (QFD) and House of Quality
3. Case study based on product design approach
4. Case study of FMEA
5. Product Tear Down approach in product design
6. Design for —X
7. Case study in Product Life cycle Management (PLM)
8. Case study on identification of customer needs for specific product

Elective II- Nano Manufacturing Lab
311088(B)-I

Teaching Scheme

Practical: 2 hours / week

Credit Scheme

Practical:01

Examination Scheme

PR: 50 Marks

Practical assignments:

1. To demonstrate Theory, Modeling, and Simulations of any one of the conventional techniques used in micro-nano manufacturing
2. To demonstrate production of prototype devices and examples of commercially viable products at nano scale functionality.
3. To demonstrate Theory, Modeling, and Simulations of any one of the Non-conventional techniques used in micro-nano manufacturing
4. To develop prototype of nano-device that confirm the effectiveness of the design concept and demonstrate the feasibility toward future commercialization.
5. To study features and phenomena at the nanoscale which requires instruments capable of resolutions at the nano-, subnano-, and even pico-levels such as: Scanning Electron Microscope, Atomic Force Microscope, Scanning Tunnelling Microscope.

Elective II-Statistics and numerical methods lab
311088(B)-III

Teaching Scheme

Practical: 2 hours / week

Credit Scheme

Practical:01

Examination Scheme

PR: 50 Marks

Each candidate shall be required to complete and submit the following term work.

1. Practical on parameter optimization of any one process using Taguchi based design of experiment. Validation of results using any statistical software (R/Minitab/Excel/SigmaXL/Statgraphics etc.).
2. Practical on determination of significant factors for any one process using ANOVA. Validation of results using any statistical software. (R/Minitab/Excel/SigmaXL/Statgraphics etc.).
3. Practical case study on regression analysis. (Data should be collected for some real life case). Validation of results using any statistical software. (R/Minitab/Excel/SigmaXL/Statgraphics/Matlab etc.).
4. Practical case study on regression analysis. (Data should be collected for some real life case).
5. Practical case study on multivariable optimization with constraint using any one method.
6. C programming for any 3 practical mentioned above.

Financial Management and Costing Lab
311088(B)-IV

Teaching Scheme

Lectures: 02 hours / week

Credit Scheme

Pr/Or: 01

Examination Scheme

Termwork: 50 Marks

Numerical Based Assignments using MS-Excel/MS Project/Talley etc.

1. Preparation of Financial Statements and Ratio Analysis for any industry,
2. Assignment on Payback approach, Accounting of Rate of Return, Present Value Method and Internal Rate of Return.
3. Assignment on Working Capital Management
4. Assignment on Material Cost, Labor Cost, Depreciation and Overheads
5. Assignment on Standard Costing and Variance Analysis
6. Assignment on Marginal Costing, Activity based costing and Process costing

**Production and Operations Management
311089(B)**

Teaching Scheme

Practical: 2 hours / week

Credit Scheme

Practical: 01

Examination Scheme

TW: 25 Marks

List of Experiments:

1. Introduction to Production Systems by arranging machines as per type of Production Systems.
2. Assessment of Layout of Machines based on the time required to complete the product: Selection of Best Layout.
3. Selection of Material handling equipment. Material Handling System Planning and analysis.
4. Inventory Model Implementation for the case of Product.
5. Preparation of Material Requirement Plan for the product selected.
6. Simulation case study based on Production Planning
7. Simulation case study based on line balancing
8. Simulation case study using PLM software to prepare Material Requirement Plan and Product data management

**Process Engineering and Resource Planning Lab
311090(B)**

Teaching Scheme

Practical: 2 hours/ week

Credit Scheme

Practical: 01

Examination Scheme

Term work: 50 Marks

Term Work: Term work shall consist of assignments based on following topics:

1. Part print analysis of one industrial component drawing.
2. Process sheet design of one component on GPM for Batch Production.
3. Process sheet design of one component for mass production.
4. Time estimation for assembly using flow-charting techniques.
5. One case study on two level full factorial experimental design using DOE technique.
6. One case study on Taguchi Analysis using Orthogonal Arrays.

Process sheet design shall include detailed analysis of part print, planning the best sequence of machining operations, selection of proper equipment and tooling, Selection of datum surfaces, stock preparation and blank size selection, machining time calculations, time estimates and standards, design of jigs & fixtures, design of special tooling such as form tool if required, suggest appropriate inspection methodology, preparation of process picture sheets and operation route sheet etc.

**Production Tooling-Lab
311091(B)**

Teaching Scheme

Practical:2 hours / week

Credit Scheme

Practical:01

Examination Scheme

Oral: 50 Marks

Term Work:

(All drawings on A2 size drawing sheet)

1. Design and drawing of Jigs and fixtures
2. Design & Drawing of Press tool dies (Progressive/Compound)
3. Design and drawing of Forging die.
4. Design and drawing of injection mold.
5. One practical application of press tool design using software such as VISI Progress, TopSolid Progress etc. and injection mould design using software such as Creo-Plastic advisor, TopSolid Mold, Autodesk Mould design etc.
6. Industrial visit and report

**Fabrication Lab
311092**

Teaching Scheme

Practical:2 hours / week

Credit Scheme

Practical:01

Examination Scheme

TW: 25 Marks

Course outcomes:

Students will be able to

1. Demonstrate practical knowledge for CNC programming, setting tool length offsets/part offset etc.
2. Build products on VMC machines.
3. Implement various aspects of welding process
4. Model and Create products using 3D printing process

Each candidate shall be required to complete and submit the following term work.

1. Any one job on CNC turning centre/CNC milling centre/vertical machining centre
2. Design and fabrication of any one part using arc welding process
3. Any one job using 3D Printing
4. Mini project based on design and development of prototypes of working machines, mechanisms, robots, production tools etc.

**Internship
311093**

Teaching Scheme

Internship: 4 hours / week

Credit Scheme

Internship:04

Examination Scheme

TW: 100 Marks

Course Outcomes

After successful completion of the course, students should be able to:

1. Communicate a practical understanding of how a manufacturing plant actually operates
2. Demonstrate the ability to integrate and apply theoretical knowledge and skills developed in various courses to real-world situations in a business organization
3. Exhibit the ability to effectively work in a professional environment and demonstrate work ethic and commitment in a work-based environment
4. Demonstrate the ability to successfully complete internship assignments.
5. Reflect on personal and professional development needs and set strategic goals for advancing along an intended career path
6. Communicate effectively in a professional environment orally and in writing.

Every student should undergo Internship for minimum of 50 Hrs in any manufacturing industry and submit a detailed report based on it.

Guidelines for preparing the Internship report

The report should be divided in two parts with all appropriate details as mentioned below:

Part I:The type of industry (service, manufacturing, non-profit, government), its mission and values, its major customers, its marketing strategies, how it is organized, its employees, turnover, financial aspects.

Part II: Clear description about the problem or issue relevant to selected industry, data collection process, methodology adopted to solve the problem, detail analysis, results and conclusions.

Mandatory Audit Course 6: Technical writing and communication skill

311094

This course is intended to equip the students with skills to write technical reports and also to equip them with skills to communicate and articulate in English (verbal as well as writing)

Technical Writing –

- Various forms of scientific writings- theses, technical papers, reviews, manuals, etc.
- Various parts of thesis and research communications (title page, authorship contents page, preface, introduction, review of literature, material and methods, experimental results and discussion); Writing of abstracts, summaries, précis, citations etc.;
- Commonly used abbreviations in the theses and research communications;
- Illustrations, photographs and drawings with suitable captions; pagination, numbering of tables and illustrations;
- Writing of numbers and dates in scientific write-ups; Editing and proof-reading; Writing of a review article.

Communication Skills –

- Grammar (Tenses, parts of speech, clauses, punctuation marks);
- Error analysis (Common errors);
- Concord;
- Collocation; Phonetic symbols and transcription;
- Accentual pattern: Weak forms in connected speech: Participation in group discussion: Facing an interview;
- presentation of scientific papers
