1. Teaching is overall ok.
But student must be taught on the basis of the applications of the concepts which are being taught.
2. Industrial exposure should be introduced, if not possible practically then at least verbally the introduction should be given to students, that what kind of challenges, situations student will have to face, what is the knowledge required to get into IT industry, what are the different fields to make career in IT, not just industry but out of industry what can be chances to use your knowledge and grow yourself. All thses things are new to students if they come to t least get introduced to these things verbally they can at least think about it search about it ask teachers and faculty about it.
3. When students are at the end of 3 rd year engineering they come to know very slowly about the companies, the rounds for placements, and its a very least time for students to prepare for the interviews in campuses.
If when students enter their respective departments in second year, there must be seminars about various ways of careers in this fields what things are necessary to prepare already, if you dont prepare what things can go wrong all these things must be taken in front by the faculty, so that students will realise the things that they must have to do for their career and start working from the early days so that they can have good placements and career. Seminars happen in the department but those are generally marketing seminars about the different courses and certifications, those are necessary but career guidance and ways which are open foe students to explore early realisation of things to take care for placements all these thing must and must be taken into consideration by the department.

There is a huge gap in the trainings provided in companies and the in classroom and that needs to be bridged. Showing informative animated videos are of more help than just talking.. However this problem is with almost every college in this system. Upgrading this system is required. Overall it was a mixed experience of good and bad. :)
