2. Training on REVIT Architecture & Structure

- Revit is a solitary application constructed for Building Information Modelling (BIM) with attributes for architectural design, MEP (mechanical, electrical and also plumbing) as well as structural engineering and construction. Revit is not BIM. Revit is developed for BIM. Revit as well as various other applications created BIM help designers design, simulate, picture and also work together in order to maximize the benefits of the interconnected information within a BIM version. The keyword in BIM is "Information".
- BIM is centred on versions composed of objects. Revit develops these items which contain data designers can see in various sights: 2D drawings, 3D models as well as schedules (listings). When one item of information changes in one views, it is upgraded in all various other views immediately by Revit due to the fact that each view is presenting the exact same information. Objects can additionally be associated with various other objects. So, to duplicate, if one item changes, any kind of relevant items reflect those modifications also.
- BIM is centred on versions comprised of items. Revit develops these things which contain information developers can see in various sights: 2D illustrations, 3D versions as well as routines (checklists). When one item of information adjustments in one sight, it is upgraded in all various other sights instantly by Revit due to the fact that each sight is showing the exact same information. Items can likewise be connected to various other items. So, to duplicate, if one item modifications, any type of relevant things mirror those adjustments also.

Student Training Program

Introduction

Worldwide, the advancement in technology has not only revolutionized the scope of engineering education, but also redefined the expectations from engineering graduates. At STES, a need was identified to start an innovative *"Student Training Program"* that would help the students to build a personality equipped with exquisite technical and non-technical skills. With this in mind, a state of the art Student Training Program is being implemented from the year 2013. While the aim of this program is *"to enhance the quality of the students by empowering them with skills those are globally at par"*, the objectives of this program are to:

Program Details

This training program, the duration of which is 120 hours that spread over 5 semesters, is to be undertaken by the student from the start of the Second Year of Engineering. The details of the program are mentioned in Table 1.

Unique Features

The unique features of this program are mentioned below.

- Integration in to the curriculum: Training incorporated into the curriculum to help prepare and evaluate the students in technical and non-technical skills.
- Lecture Recordings: As a part of STP, subject wise, all lectures are recorded by expert faculty on K-point server. This is an LAN based resource to help the students learn and revisit the concepts discussed in class.
- Need based training: Training provided is based on the need of the student
- Expert faculty: A good blend of class room and hands on training provided by expert faculty
- AMCAT assessment: Training need and outcome assessed using AMCAT, a job test preferred by many industries.
